

NEW PARAGRAPH TO BE ADDED BELOW PAGE 2, LINE 27 OF THE SPECIFICATION

As illustrated by the drawing, the key rails 25 are directly and removably mounted to the rectangular perforations 24 in the segments 22 forming the rear wall so that the key rails are non-movably mounted at fixed positions on the rear wall when the key box is in an assembled configuration. The top and bottom edges of the segments 22 are substantially planar so as to form a continuous rear wall when the segments 22 are stacked atop one and other.
